

Anti-slip treatment

Anti-slip treatments for marble, limestone and terrazzo.

Products: S 050, S 150 S 250, S 450.

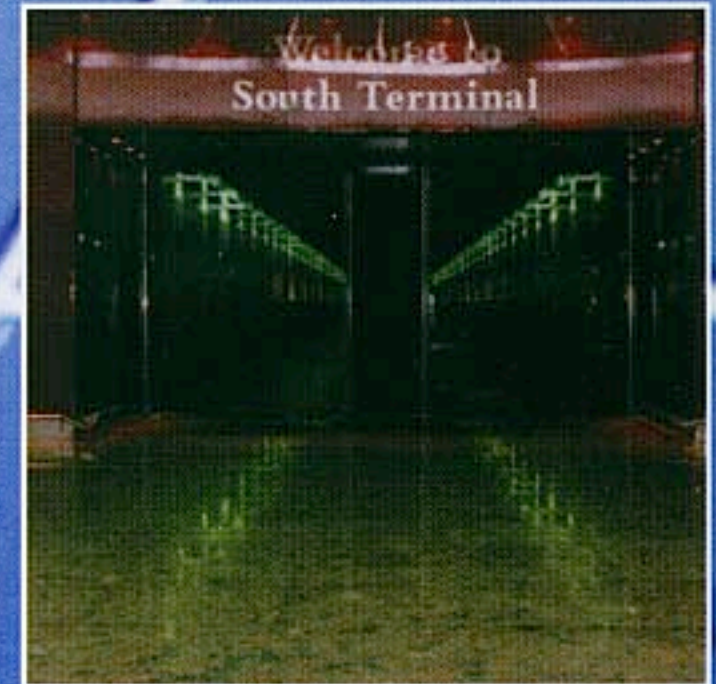

Natural stone looks beautiful, however, there are many points to be aware of when using natural stone. Polished stone can be very slippery in wet conditions. **SLIPSTOP** has developed a range of products specially aimed at protecting the natural look of the stone whilst ensuring maximum slip-resistance. **SLIPSTOP** anti-slip treatments are single application treatments that make slippery floors anti-slip within hours.

SLIPSTOP anti-slip treatments are not coatings and will consequently not peel off at any time. Through a chemical reaction, **SLIPSTOP** treatments create a micro structure to the surface, leaving the floors slip-resistant even when exposed to water, grease, oil etc.

SLIPSTOP treatments are carried out by our own specially trained personnel at times most convenient to the location. Smaller contracts are normally completed within a few hours, with no drying or curing time. This eliminates the need for shutdown of the facilities; no loss of profit and minimum inconvenience. For natural stones the application of **SLIPSTOP** anti-slip treatments are always followed by an application of one of the **SLIPSTOP** Impregnators, to ensure maximum stain protection, increased life span and eased cleaning of the floor.

Benefits

- Eliminates accidents caused by slippery floors
- Effective under wet and dry conditions
- Single application, guaranteed for up to 5 years (dependant on type of stone)
- Can be used indoors and outdoors
- Invisible, does not alter the appearance
- Kills bacteria and deters re-growth
- Ensures your floor conforms to BS 5395
- MAF approved for use in food production areas
