

SLIPSTOP

Anti-slip treatment

Anti-slip treatments for terrazzo and concrete

Products: S 450, S 650, S 850.

SLIPSTOP anti-slip treatments are single application treatments that make slippery floors slip-resistant within hours. Through a chemical reaction, **SLIPSTOP** treatments create a micro structure to the surface, leaving the floors non-slip even when exposed to water, grease, oil etc.

SLIPSTOP anti-slip treatments are not coatings and will consequently not peel off at any time. **SLIPSTOP** treatments are carried out by our own specially trained personnel at times most convenient to the location. Smaller contracts are normally completed within a few hours, with no drying or curing time. This eliminates the need for shutdown of the facilities; no loss of profit and minimum inconvenience. **SLIPSTOP** anti-slip treatments have over and over again proved to be the best and most cost effective solution to these problems.

Technical information:

Products S 450, S 650 and S 850 are sophisticated blends of chemicals. When applied to terrazzo and concrete surfaces, they create a microscopic roughness, thereby increasing slip-resistance, particularly in wet condition by up to 400%. Application by fully trained and certified personnel only.

Slip prevention is paramount as millions of people suffer, not only from the result of accidents, but more commonly from the less spectacular problems slippery surfaces create. People who work in places with slippery floors, suffer from muscle tension and headaches, leading to lack of concentration as well as absence from work.

Benefits

- Eliminates accidents caused by slippery floors
- Effective under wet and dry conditions
- Single application, guaranteed for 5 years
- Can be used indoors and outdoors
- Kills bacteria and deters re-growth
- Requires no drying or curing time
- Ensuring your floor conforms to BS 5395
- MAF approved for use in food production areas
